EDUCATION

Kean University

Bachelor of Science in Information Technology, Cybersecurity Option

Union, NJ

September 2018 – May 2025

EXPERIENCE

Sales Associate

Tommy Hilfiger

August 2019 – Present

Elizabeth, NJ

- Deliver exceptional customer service by listening to customer needs and suggesting appropriate products
- Regularly exceed sales goals through strategic up selling and clear, concise product demonstrations
- Accurately process cash and point of sale transactions, ensuring end-of-day reconciliation without errors
- Maintain thorough product knowledge of styles, fabrics, and seasonal offerings to answer customer questions on the spot
- Coordinate with team members on restocking, inventory checks, and quickly resolving customer issues

PROJECTS

Audio Sampler Web Extension | *HTML, CSS, JavaScript, API*

January 2025 – May 2025

- Developed a browser extension using HTML, CSS, and JavaScript that allows users to record, trim, and download audio directly from Chromium-based browsers
- Designed and Implemented a responsive, modern UI with light/dark mode toggle and tab-based navigation (Recorder, Options, History)
- Integrated MediaStream API and waveform visualization to enable real-time audio preview and in-browser editing
- Packaged and deployed the project as a Chromium-based web extension, enabling offline use and seamless integration with the browser environment

Weather App | *Android Studio, XML, API, Java*

September 2024 – December 2024

- Developed a mobile app to display real-time weather updates using API's, improving accessibility to weather information
- Implemented location-based services to retrieve weather data for the user's current city
- Designed an intuitive user interface following Material Design principles, enhancing user experience
- Integrate multiple APIs to offer diverse weather predictions, enabling users to compare forecasts

Employee Management System | *MySQL, PHP, XAMPP*

September 2024 – November 2024

- Developed a PHP dashboard for CRUD operations on employee data
- Developed a database-driven system to manage employee records, including department assignments and salary details
- Implemented secure authentication and role-based access controls for admins and users
- Optimized MySQL queries for performance and scalability

Spotify Discography Searcher | *Spotify API, JSON, JavaScript*

September 2023 – December 2023

- Developed a website that retrieves and displays artist discographies using Spotify's Web API
- Designed an interactive search interface to provide seamless navigation and results display
- Parsed JSON responses to render results, ensuring real-time updates and responsiveness
- Implemented error handling and rate-limiting mechanisms to maintain app reliability during high traffic
